THE UNITED STATES PERFORMANCE HANDICAP RACING FLEET

The United States Performance Handicap Racing Fleet (USPHRF) is an empirical handicapping rule administered by a technical rule committee of US Sailing. The USPHRF Committee promotes performance handicap racing for monohull and multihull sail boats applying the PHRF rule. The Committee researches, develops, and distributes guidelines for performance handicapping using systematically applied empirical methodology to determine estimates of speed potential.

Below is the 2016 PHRF Committee with contact information:

PHRF Committee	Position	Address	Phone	Type
Bingman, Bruce	Chair	498 Sara Dr. Annapolis, MD, 21401	1 (410) 280-2309 1 (703) 801-4388 1 (202) 781-5932	Home Mobile Work

USPHRF falls under the purview of US Sailing Association's Offshore Office. The Offshore team is as follows:

US Sailing Offshore Office Staff

Nathan Titcomb, Offshore Director
Eric Baittinger, Chief Measurer
Christian Bragdon, Offshore Technical Assistant
Deborah Oliver, Offshore Coordinator

This publication continues the long standing practice of making available handicap data from PHRF affiliated fleet handicaps on an annual basis. These data are derived from reports submitted by the fleets. The Offshore Office of US Sailing may also provide guidance when determining an initial handicap. In addition to this book, some documents are also available on the USPHRF website at: http://www.ussailing.org/racing/offshore-big-boats/phrf/.

Considerations when using this listing to determine a handicap by averaging fleet data

Simply averaging handicap data presented in this collection to determine an initial handicap for a boat new to a fleet may result in a flawed estimate of its speed potential.

There are several reasons for this: Handicaps may not have been reported or updated for several years even though several are counted in this listing, no boats of a type are currently counted in this listing (showing zero boats), geographic differences in typical wind and water conditions and courses are not considered; extreme values will lead to spurious estimates of a handicap by artificially raising or lowering the calculated average; skipper and crew influences lead to a strong bias; or statute miles rather than nautical miles are used as a basis for handicaps. If averaging handicaps of other fleets is still wanted, a median rather than an arithmetic average is more desirable after eliminating the aforementioned problems in a particular boat types listing.

Determining an initial handicap for a boat new to a fleet can be problematic. While some may use a calculated average, a more effective method would be to utilize a handicap from a fleet that is similar and to speak with the fleet's handicappers to understand the basis for the handicap. Fleet characteristics are listed on the USPHRF website. After the initial handicap is chosen and the boat is raced, an empirical analysis of performance may permit a more refined estimate of its speed potential.

Section 2. National Reference Ratings

National Reference Ratings

PHRF racing participation is declining across the country. While there are many factors that have caused this decrease in participation, one of the recurring complaints voiced by racers and race organizers alike is that PHRF handicaps are not always fair. The realities are that PHRF fleets suffer from two major disadvantages. (1) Most are constrained to one time-on-distance rating to cover all situations and (2) there is little crosstalk and observed performance information sharing available to the fleets. We believe the National Reference Ratings (NRR) concept described below can be a step in the right direction to resolve these problems and US Offshore is ready to provide the leadership and resources to make it happen.

Our approach is to create "National Reference Ratings" (NRR). There are two key components behind these NRRs. First, there must be a definition of what boat configuration the rating is based upon. Once defined, and only then, can one establish the base rating for boats. We plan to do this first for Standard Production classes and once those are completed move to One-Off designs. To ensure alignment with the existing PHRF ratings, NRR will set the J-35 time-on-distance rating to 72 sec/mile. NRR will be based on medium wind strengths. The applicability to light or heavy air conditions will be discussed later in this document.

US Offshore will publish these National Reference Ratings so they are available to the PHRF fleets. The NRR rating process will start with the popular classes. The US Offshore team, working in concert with a National Panel of Senior Handicappers selected from the major fleets across the US, will produce these NRR ratings. Currently, this panel is looking at the first block of 150 popular Standard Production classes. This is just the tip of the iceberg as there are several thousand designs racing in PHRF. Our Red, White and Blue PHRF Handicap book contains ratings for some 5,000 production classes.

This National Panel of Senior Handicappers has over 150 years of combined experience racing, evaluating, and creating PHRF ratings. The panel is comprised of:

Bruce Bingman
Dan Nowlan
Paul Ansfield
John Collins
June Hendricks
Jim Tischner

NRR will actually have two ratings: one for windward-leeward courses, the other will be for random leg courses. We believe that the introduction of a second rating tailored to distance courses will improve rating accuracy without introducing unpalatable complexity. The reasoning is simple: when only one rating is available, it gravitates towards a rating representing the types

of events a boat usually sails. As we know, there are many boats that do not perform when sailing windward-leeward courses, but sail well on a reach. Depending on the course preferences of boat owners, ratings for the same design can be markedly different from fleet to fleet. With two ratings, a poor windward-leeward boat would not carry the rating assessment for exceptional reaching performance. The net effect of introducing this second, distance rating should result in fairer racing for all.

NRR will also encourage the switch from Time on Distance (ToD) to Time on Time (ToT). This departure from the traditional PHRF format will increase accuracy and fairness. When racing under ToD, the ratings stay the same as wind speed increases or decreases. Hence, when the wind drops, the fast boats always enjoy a rating advantage and conversely small boats enjoy a rating advantage when the wind builds.

It has been shown through analysis that a medium air strength derived ToT rating will produce accurate club level racing scoring in light air. That fact is what drives us to promote ToT NRR as the base format.

Another benefit to ToT scoring is the reduction of work for a race committee. There is no need to measure course distances to determine the corrected times. This further increases the accuracy of the ratings since there is no error when setting a course distance plus it makes putting on races easier.

NRR will also review common changes from the base-rating configuration, e.g. a boat sailing with a 100% headsail when 155% is the standard for that boat's class or when a change is made to a longer spinnaker pole or sprit. Currently adjustments have the same value in seconds per mile for displacement boats and planing boats. Studies done by US Offshore for PHRF fleets have shown this not accurate. Revised NRR "Standard Adjustments" will be derived, published and applied to NRR certificates.

Heavy air racing has its own set of issues. A medium air based NRR rating will fail for planing boats if applied to heavy air racing. Therefore, we will eventually develop a heavy air offset table. This is not planned for the initial phase of this project.

Current Status and Expectations

Bruce Bingman and his panel have completed the NRR windward-leeward ratings for about 150 of the most popular boats. This is our initial report of the W/L NRR handicaps for medium air.

The distance component and configuration summary are underway and will be reported as soon as they are available.

Section 3. **PHRF Handicaps Data**

Monohull
Multihull

PHRF© Base Handicaps

In this section are tables giving the base handicaps for stock series produced models as reported by Member Fleets.

The list contains all handicaps reported before early February of 2014.

The tables are in alphabetic sequence by model name. Under each model name, the PHRF© fleet reporting a handicap for that model appears first, the seconds-per-mile handicap appears second, the "experience" code third, the year of the latest update to the handicap information fourth, followed by the total number of boats issued that handicap during the past season. In cases where no year is shown, the handicap was last adjusted prior to 1988.

"Experience" codes reflect each Fleet's observational experience in handicapping each model. The codes can be understood as:

A = initial handicap

B = up to one season of experience

C = beyond one season of experience

Data from previous years will continue to be printed.

In reporting the base handicaps, Fleets were instructed to conform their handicaps to the following standard assumptions:

1. the spinnaker pole length is equal to 'J',
2. the spinnaker maximum width is 180% of 'J',
3. the spinnaker maximum length is equal to .95 of the jibstay length, i.e., .95 x $\sqrt{I^2 + J^2}$,
4. the genoa LP is between 150% and 155% of 'J',
5. the boat is in racing condition,
6. the boat has either a folding or feathering propeller, a two bladed solid propeller in aperture, or a retractable outboard motor,
7. the hull and appendages are unmodified, and
8. full length battens are usually allowed without penalty.

NOTE: See the "Standard Dimensions" section of the PHRF© Handbook for the definitions of the previous abbreviations.

The "Fleet Profiles" section of the **US SAILING PHRF© Fleet Handbook** should be referenced for descriptions of the racing conditions of the areas reporting handicaps.

USE OF PHRF© HANDICAPS

PHRF© handicaps are used in the following manner:

1. Time on distance scoring
   A) The seconds-per-mile handicap is multiplied by the course distance, producing the yacht's time allowance for the race,
   B) The time allowance for the yacht is subtracted from the yacht's finish time, yielding the corrected time that determines the final ranking for scoring purposes.

2. Time on time scoring:
   A) A time correction factor (TCF) is generated. A TCF that works over a variety of conditions is:

$$TCF = \frac{650}{550 + PHRF}$$

   **If the course is purely windward-leeward, then a denominator of 650 + PHRF© works better. If the race is a downwind port-port race, a denominator of 450 + PHRF© works well.

   B) The TCF multiplies the elapsed time to yield the corrected time:

$$CT = TCF \times ET$$

   Time on time scoring sometimes works better when the conditions differ from 'normal.'

IB	Inboard	**WK**	Wing Keel
K	Keel	**VTM**	Very Tall Mast

ODR: Certain models are now identified as One-Design Rig (ODR) classes. ODR classes are marketed with standard rigs which may in some respect not conform to the base handicap assumptions, e.g., an over length spinnaker pole is standard on the J-30. ODR boats are raced in their one-design class rule configuration, are handicapped as though they meet the base handicap assumptions and are not further penalized for over length poles, etc. provided they essentially conform to their one-design class rig dimensions.

Caution should be used in looking at non-ODR handicaps for these boats. Some fleets report the ODR handicap as their base boat.

Some fleets have reported handicaps on open, one-design boats such as Soling, Etchells 22, and Star. These handicaps should be used with caution as these boats do not meet many of the normal PHRF guidelines. For example, hiking may or may not be allowed. Trapezes are not allowed when racing within PHRF© venues; therefore, they should not be reflected in a PHRF© handicap.

HANDICAPS FOR 'GENERIC' IOR RATINGS

PHRF handicaps corresponding to the IOR rating limits of the various IOR Level rating classes are given on page 73. Ratings are listed for half ton, three-quarter ton; one ton and maxi boats.

COURSE LENGTHS

Most fleets report their handicaps based on Nautical Miles. Those fleets which base their handicaps on Statute Miles or variants of Nautical Miles are listed below.

Chicago M.O.R.F. – Statute Miles + 10%
Lake Lanier – Statute Miles
Bellport Bay Y.C. – Statute Miles

AREA DIFFERENCES

Caution should be used when comparing one fleet's handicaps with those of another fleet's. Some fleets seem to have a slight bias built in. For instance, the YRA of Long Island Sound, Narragansett Bay, and some of Chesapeake Bay's handicaps seem to be a little higher than the average while those of the Northwest and BC Sailing are ten percent higher, in general, than the average. Nova Scotia handicaps tend to be lower than average. These generalizations, however, are not always true.

GOLF HANDICAPS

Some fleets have found it useful to adjust handicaps on race by race, based on performance in the last race. This is done by adjusting a handicap by a small percentage of the seconds per mile that the boat in question finished from a reference boat. A 10% of the seconds per mile difference is frequently used as is the third place boat as the reference boat. If the seconds per mile exceeds some number, say 40 seconds per mile, no adjustment is made.

DROP KEELS

An "at" sign {@} proceeding the model name indicates that this model has more than 10% of its displacement in a movable appendage capable of being raised or lowered. Some fleets require that this appendage be pinned to preclude vertical movement while racing.

MULTIHULLS

Reported handicaps of multihulls are listed at the back of the book of handicaps.
